Work completed

- Prepared conference submission package in docs/submission/: demo paper, poster paper, decisions doc, checklist.
- Wrote SIMULATOR_IMPROVEMENT_ROADMAP as a 6-phase product improvement plan (tooling, backlog realism, team structure, human–AI depth, validation, platform).
- Created PARAMETER_DICTIONARY.md documenting all testbed inputs and outputs.
- Finalized architecture figure and screenshot placeholders for demo track.

- Drafted 8–10 minute live demo script covering baseline comparison, CI manipulation, task mix, trust miscalibration, Monte Carlo, and sensitivity.
-

Connection to learning objectives

- Applied academic writing and dissemination skills to real submission deadlines.
 - Understood employer/research community expectations for transparent, critique-friendly tools.
 - Identified future career-relevant duties: research software engineering and HCI/demo preparation.
-

Challenges and how they were handled

Splitting content between demo and poster papers required careful scope control. I used SUBMISSION_DECISIONS.md to document rationale and avoid duplication between documents.

Plan for next week (24–31 Jul 2026)

- Final code and documentation polish.
 - Complete internship final report draft.
 - Collect employer testimonial; prepare appendices (weekly reports, transcript).
